

Proper handling and cleaning of glass and polycarbonate during installation are crucial to maintaining their integrity and appearance. Incorrect methods can result in permanent damage. Standard Bent Glass (SBG) emphasizes the importance of adhering to the following guidelines:

**1. Cleaning Solution Application**

- Apply a mild soap and water solution uniformly to the surface using a soft applicator.
- Immediately remove all cleaning liquid with a soft flannel or cotton cloth.
- Ensure no metal, sand, or foreign particles are trapped between the cloth and the substrate to avoid marring or damaging the surface.

**2. Surface Protection**

- Avoid using cleaning solutions in direct sunlight or at elevated temperatures to prevent streaking and potential surface damage.
- Do not use razor blades, metal scrapers, putty knives, or squeegees on hard-to-remove substances as they can scratch the surface.
- Refrain from using abrasive or highly alkaline cleaners.

**3. Polycarbonate Specifics**

- Never use petroleum based solutions, acetone, MEK, or other solvents on polycarbonate surfaces as these chemicals can cause severe damage.

**4. Gasket and Sealant Care**

- Dry all cleaning solutions from window gaskets and sealants promptly to prevent deterioration.

**5. Recommended Cleaning Agents**

- The following diluted cleaning agents are compatible with both glass and polycarbonate surfaces:
  - **Joy**
  - **Palmolive**
  - **Isopropyl Alcohol**

By following these instructions, you help ensure the longevity and clarity of your glass and polycarbonate products. Should you have any questions or need further assistance, please contact Standard Bent Glass
